1 IN THE ABSTRACT

2 Please delete the Abstract and insert the following:

3 --A mobile device includes one or more segments that are moveably coupled to one another
4 to move between an extended and contracted position. A configuration is provided in which a
5 display assembly is provided on the first segment, and an input device is provided on the
6 second segment. The first input mechanism overlays the display when the first and second
7 segments are in the contracted position. In the extended position, a portion of the display
8 assembly is available for use.--
